

## Introduction

This Data Dictionary and Logical Data Model define all data elements involved in Smarter Balanced test results whether in a transmission format or stored in a database.

The [Four-Layer Framework for Data Standards](#) offers context for how this specification relates to other SmarterApp specifications. The four layers are:

1. Data Dictionary: Definition of data elements including name and interpretation.
2. Logical Data Model: Logical definition of entities as groups of elements and inter-entity relationships.
3. Serialization: Concrete digital format for storage or transmission of entities.
4. Protocol: Transport layer and message formats for exchanging serialized entities.

This specification describes test results at the Data Dictionary and Logical Data Model layers (layers 1 and 2). Other specifications address serialization and transmission protocols (layers 3 and 4). Field names and descriptions are mostly drawn from the [Common Education Data Standards](#) (CEDS) which also operates at layers 1 and 2.

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [RFC 2119](#).

## Extensibility

Nearly every test result format we have encountered includes additional information beyond the fields defined here. Data serialization formats should not be constrained to just these fields. Certain serialization formats like XML and JSON include standard extension mechanisms. Accordingly, extensions should be made at the serialization level. *Applications that receive data should tolerate and ignore fields that they don't recognize.*

## Change Log

8 June 2016	Acceptable values for EconomicDisadvantageStatus are "Yes" and "No". Remove "Unspecified" as an acceptable value. This is compliant with CEDS and with current practice.
25 May 2016	Update field cross-references for Claim2 and Claim3 scores and SEM in the Test Score Information section, specifically for ELA. AIR's SRC2 is SmarterBalanced Claim3 listening and speaking and AIR's SRC3 is SmarterBalanced Claim2 writing.
14 May 2016	Clarify definitions of Rater Scores and Rater IDs.
2 April 2016	Add footnotes to AdministrationCondition and Completeness to include references to associated business rules.
9 May 2017	Added optional Filipino ethnicity
26 July 2018	Added optional EnglishLanguageAcquisitionStatus
28 Nov 2018	Added "Other" as a Sex. Adjusted the definition of "TestSessionID". Adjusted the Scale Score to allow for 6 claims and target level scores. Adjusted Appendix A to include the target level scores.

21 May 2019	Added "Expired" as a value for the Completeness field
15 Sep 2019	<p>The following adjustments were made to account for non Smarter Balanced tests:</p> <p>Adjusted the acceptable values for ScaleScoreAchievementLevel to include non Smarter Balanced tests.</p> <p>For claims 5 and 6 Theta and ThetaStandardError, adjusted required to "Conditional".</p> <p>For StudentRelativeResidualScore, StandardmetRelativeResidualScore, ItemCount, ItemCountScored, RawScore, adjusted required to "Conditional"</p>

## Logical Data Model

The entity-relationship diagram in Figure 1 represents the logical data model for test results.

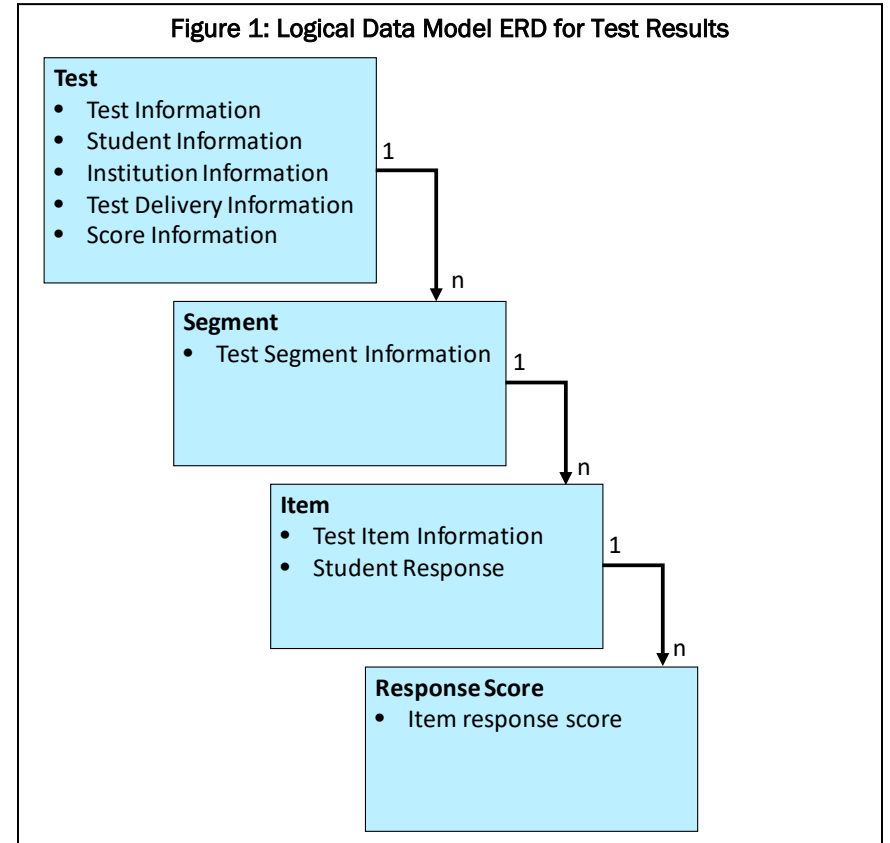

The data follows a strict hierarchy. Each test result has one **Test** record which contains information about the test itself; about the student and the institution to which the student belongs; about test delivery including date, time, and environment; and the overall test score information.

Each Test has one or more **segments**. Segments can be used for multi-part tests such as the Performance Task (PT) and Computer-Adaptive Test (CAT) portions of the Smarter Balanced summative tests. Segments may also be used for embedded field tests.

Each segment is composed of multiple assessment **items**. For fixed-form segments, all students are presented the same set of items in the same order. For computer-adaptive segments, the items presented and the order varies according to performance and other factors managed by the adaptive assessment engine. Each item record contains information about the assessment item and the full student response to the item.

An item has one or more **response scores** most items have a single score. However, certain items are scored on multiple dimensions each representing a different skill family. For multidimensional items there is one response score record per scoring dimension.

The hierarchical data organization is well-suited to certain serialization formats like XML and JSON. However, CSV is a more popular format for transmitting test results and it is not well-suited to hierarchical data. When rendering test results in tabular formats like CSV a common approach is to use two tables. One table represents the test information. The second table (usually in a different CSV file) collapses the segment, item, and response score information into a single table. Segment and item information is repeated for each score. Since most items have only one score and there is very little segment information in the data model, this approach is sufficiently efficient.

## Data Dictionaries

The following tables are the data dictionaries for each of the four entities: Test, Segment, Item, and ResponseScore.

<sup>1</sup> The field definition for "Subject" matches CEDS. But the CEDS value enumeration is not used.

<sup>2</sup> The value of "scanned" for DeliveryMode is obsolete. Use "paper" for all paper deliveries regardless of how the test is scored or digitized.

<sup>3</sup> If the form changes, the AssessmentId should also change. Therefore, the version number is not yet a required field.

<sup>4</sup> For de-identified data, the State-Issued Student ID (SSID) MUST NOT be used. Any other method that generates a consistent ID for each student is acceptable. When de-identifying data, Smarter Balanced recommends applying a keyed-hash algorithm like HMAC-SHA1 to the SSID. For more information, see <http://www.smarterapp.org/deployment/HashStudentIdSample.html> and <http://www.smarterapp.org/deployment/DeidentificationOfStudentIDs.html>,

<sup>10</sup> DistrictId, DistrictName, SchoolId, and SchoolName are optional in de-identified data. In certain areas, the school or district may be small enough that the school and/or district combined with gender, race, and ethnicity can identify the student. In those cases, the district and school information should be omitted to preserve student privacy. However, doing so prevents the generation of anonymous aggregate reports at the school and district level. Accordingly, members should choose their policy for inclusion according to local policy, population patterns, and requirements.

<sup>16</sup> ISAAP Accessibility Feature Codes: <http://www.smarterapp.org/specs/ISAAP-AccessibilityFeatureCodes.html>. The physical format of the list should be specified in the data serialization specification. Some formats are more convenient for compatibility while other facilitate analytics.

<sup>17</sup> As of 2015 The DWSA format uses separate fields for each accessibility code family.

Test Field Name	Data Type	Width (chars)	Description	Acceptable Values	Required	Reference	Cross Reference

<sup>18</sup> CEDS defines this as "A space-delimited list of product tokens (keywords) with optional comments that identifies the client hardware and software with which the assessment was delivered to the student during the assessment session." That is the format in which User-Agent strings are delivered. See <http://useragentstring.com> and <http://www.w3.org/Protocols/rfc2616/rfc2616-sec14.html#sec14.43>.

<sup>19</sup> The TRT format uses the <Score> element for all scores and standard errors. See Appendix A for how to identify each particular score.

<sup>20</sup> In place of Standard Error, the DWSA format uses AssessmentSubtestMinimumValue and AssessmentSubtestMaximumValue which are the scale score minus and plus the standard error respectively. The same principle is applied to subscores which use AssessmentSubtestClaim1MinimumValue and AssessmentSubtestClaim1MaximumValue (substituting the claim number for 1 in subsequent claims).

<sup>21</sup> Theta Score and Theta Standard Error are the values calculated before conversion to Scale Score and application of HOSS and LOSS values.

<sup>22</sup> Beginning in School Year 2015-2016 Theta scores are required for the overall score and for claim scores. In this year, members have been given multiple options for applying the Highest Operational Scale Score (HOSS) and Lowest Operational Scale Score (LOSS) when calculating the Scale Score from the Theta Score. When comparing scores from year to year, Scale Scores should be re-calculated from the Theta Score using consistent HOSS and LOSS values.

<sup>23</sup> Claim scores are required if the associated test produces them. For example, the Smarter Balanced summative tests produce four claim scores for ELA and three for Mathematics. When a claim score is present, the associated standard error and achievement level are also required. Interim Assessment Block (IAB) assessments do not generate claim scores.

## Entity Segment

**Description** Information about one test segment.

**Relationships** n:1 Segment to Test  
1:n Segment to Item

**Occurrence** One occurrence per test segment included in a test. Most Smarter Balanced tests have one segment which is either fixed-form or computer-adaptive.

**Table 2: Segment Entity Fields**

## Entity Item

**Description:** Information about one test item.

**Includes:**

- Item information
- Student response

**Relationships:** n:1 Item to Segment

NumberOfVisits	xsd:unsignedInt	8	Number of times the student set or changed a response to the item	Integer 1 or greater	Optional		TRT:numberVisits DWIL:numberVisits AIR:NbrItemVisits
ResponseDuration	xsd:float	8	The total amount of time in that a person spent responding to a given assessment item. When multiple items are on a page, the time on that page MAY be divided evenly among the items. <sup>25</sup>	Time spent in seconds. Decimals may express fractions of seconds.	Required <sup>26</sup>	<a href="https://ceds.ed.gov/element/000402">https://ceds.ed.gov/element/000402</a>	TRT:pageTime ÷ pageVisits
ResponseContentType	xsd:token	50	MIME type of item response. E.g. text/plain	One or more printable characters	Optional		TRT:Item/mimeType AIR:RespTypCd
ResponseValue	xsd:string	unlimited	The student's response to the item.		Online: Always	<a href="https://ceds.ed.gov/element/001063">https://ceds.ed.gov/element/001063</a>	TRT:Item/Response AIR:Response

<sup>25</sup> A common type of analysis is to take the sum of time spent on items to estimate the time spent taking a test. Therefore, allocation of time to items SHOULD be done in such a way that taking the sum of times produces an accurate estimate of aggregate time (e.g. time on test or time on segment). Many test delivery systems can only measure time spent on a page, not time spent on an item. When multiple items are on a single page then the page time SHOULD be divided among the items. When there is a reading passage associated with a set of items, the time spent reading the passage SHOULD be divided among the associated items.

<sup>26</sup> ResponseDuration is newly required as of SY 2015-2016.

<b>Entity</b>	<b>ResponseScore</b>
Description	Represents a student's score for a test item.
Relationships	n:1 ItemScore to Item
Occurrence	Most items have a single score. However, certain items such as extended writing (WER item types) have scores in multiple dimensions. In those cases, there will be one ItemScore instance per dimension.

**Table 4: ResponseScore Entity Fields**

ResponseScore Field Name	Data Type	Width (chars)	Description	Acceptable Values	Required	Reference	Cross Reference
ItemScore	xsd:float	8	The score given to a person's response to an assessment item.	unsigned float	Always	<a href="https://ceds.ed.gov/element/000724">https://ceds.ed.gov/element/000724</a>	TRT:Item/score DWIL:score AIR:ItemScore
ScoreDimension	xsd:token	0	Dimension name or code to which this score corresponds.	One or more printable characters. May be blank or omitted if the item has only one scoring dimension.	Required if item has more than one scoring dimension.		TRT:Item/ScoreInfo/scoreDimension AIR:ScoringDimension
Rater1Score	xsd:float	8	The score given by hand scoring rater 1	Unsigned float	Required for Validity Studies	<a href="https://ceds.ed.gov/element/000724">https://ceds.ed.gov/element/000724</a>	AIR:Scr_Rater1

Rater3Score	xsd:float	8	Possible reconciled score given by a hand scoring rater. If there is sufficient difference between the scores of rater 1 and rater 2, then a third rater will provide a reconciled rating that becomes the final score. In other cases, this field should be blank.	Unsigned float or blank.	Required for Validity Studies	<a href="https://ceds.ed.gov/element/000724">https://ceds.ed.gov/element/000724</a>	AIR:Scr_Rater2
Rater3UserId	xsd:string	50	ID of the user who scored human-scored item	Alphanumeric ID up to 50 characters.	See Footnote	<a href="https://ceds.ed.gov/element/001572">https://ceds.ed.gov/element/001572</a>	TRT:userId AIR:ID_Rater3

<sup>27</sup> Rater IDs are required for validity studies; otherwise optional. In de-identified data, rater IDs SHOULD not identify the actual person. For example, an email address would be inappropriate. A numeric ID would be acceptable. A keyed cryptographic hash like the one suggested for StudentId MAY be used to convert an ID that would otherwise be sensitive.

ResponseScore Field Name	Data Type	Width (chars)	Description	Acceptable Values	Required	Reference	Cross Reference
ScoreRationale	xsd:string	255	Rationale given by the human scorer. If multiple raters gave rational may be concatenated messages.	Printable text.	Optional		

## Appendix A: Test Results Transmission Format – Scores

The TRT format uses the <Score> element for all scores. In each case, the “value” attribute provides the score value and the “standardError” attribute indicates the standard error value. Scores are distinguished by the “measureOf” and “measureLabel” attributes according to the following table:

	measureOf	measureLabel
Overall test scale score	Overall	ScaleScore
Overall test achievement level	Overall	PerformanceLevel
Math Claim 1 scale score	1	ScaleScore
Math Claim 1 achievement level	1	PerformanceLevel
ELA Claim 1 scale score	SOCK_R	ScaleScore

Math Claim 2,4 scale score	SOCK_2	ScaleScore
Math Claim 2,4 achievement level	SOCK_2	PerformanceLevel
ELA Claim 2 scale score	2-W	ScaleScore
ELA Claim 2 achievement level	2-W	PerformanceLevel
Math Claim 3 scale score	3	ScaleScore
Math Claim 3 achievement level	3	PerformanceLevel
ELA Claim 3 scale score	SOCK_LS	ScaleScore
ELA Claim 3 achievement level	SOCK_LS	PerformanceLevel
ELA Claim 4 scale score	4-CR	ScaleScore
ELA Claim 4 achievement level	4-CR	PerformanceLevel
ELA Claim 5 scale score		
ELA Claim 5 achievement level		
ELA Claim 6 scale score		
ELA Claim 6 achievement level		
Student Relative Residual score	target identifier format <sup>28</sup>	StudentRelativeResidualScore
Standard Met Relative Residual score	target identifier format	StandardMetRelativeResidualScore
Item Count	target identifier format	ItemCount
Item Count scored	target identifier format	ItemCountScored
Raw Score	target identifier format	RawScore

<sup>28</sup> Target identifier format will be replaced by the full target identifier. For Smarter Balanced this means using values like Math: "3|G-SRT|A" or ELA "1-LT|1-3"

## Appendix B: Omitted Fields

The following fields exist in the cross-referenced physical formats but have not been included in the data model. In many cases, the data is redundant with other fields. In other cases, they have been omitted because the fields have been inherited from previous projects but are not relevant to the Smarter Balanced test administration.
